

Sage ACCPAC Automatic Order Creation (AOC)

SAGE Automatic Order Creation (AOC) is a plugin component for Sage Accpac ERP system, the robust accounting and operations system for small and mid-sized business. To optimize and leverage the activities performed using Sage Accpac ERP system, ZSL, Inc has come out with a dynamic supportive tool Sage Automatic Order Creation to automate order processing for items to be delivered to the customers. It optimizes and automates many of the tasks associated with order creation easy and error free.

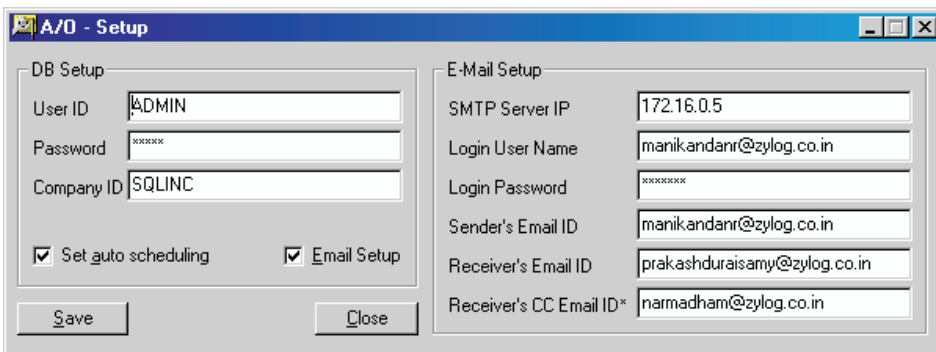

Key Features

Automated Order Creation

The orders are automatically created for the regular items to be shipped to the customers/vendors. The application has features to map the items, quantity and customer to automate the order processing as per the specified schedule

Benefits

- Minimizes the manual effort and time utilized for creating orders
- Automatic order creation making the order processing easier and faster
- Huge number of orders handled by less number of employees thereby economically saving the investment amount spend
- One-time effort put in to create repeated orders for regular customers and vendors
- Automatic scheduling owing for reduced or no slippage on deliveries and last-hour pressure in generating orders
- Minimized or error free processing due to minimal intervention
